

In Europe skin care begins at birth . . .

What is more precious to you than your children? Not too long ago I received a call from a client to inform me that she went home and read the labels on the baby products she was using on her newborn. She was quite surprised to see that the ingredients had added glycolic and alpha hydroxy acids, based in petroleum oils. She was shocked to see that she was using better products on her own skin, than what she was putting on her baby. Newborns skin releases the dead cells on its own. What the skin needs is to be nourished. Therefore, you need a product that does not strip or seal the skin. Babies skin is delicate and really needs the FANIE products to help the skin to slough naturally, while putting vitamins and minerals back into the skin. The skin will become softer and be nourished properly.

You will love pampering your cherished ones with confidence, when you try Fanie's uniquely formulated, thoroughly researched and tested line of safe, nontoxic herbal based products. They are exceptionally mild, soothing and healing, achieving great results when used daily. The cleansers are biodegradable. The Fanie products also prevent skin problems, no more baby acne, cradle cap, diaper rash, and other skin conditions. FANIE products leave the skin soft and the hair shiny, also protecting the skin from the outer elements. A great reminder: always read the labels on baby or any other products. Just released information. Researchers have found that the chemicals found in bar soaps are going through the skin and causing cancer. This was on channel 10 news in San Diego.

Fanie products we recommend for your child's skin and hair.
